

DAILY WORK REPORT

Date: 22/04/2026

Team Task Summary

DEVANAND R

Role: UI/UX

Project: Investor App

Work Completed:

I have completed the design of the **Super Admin Staff Management module**, covering a comprehensive set of features required for effective staff administration. This includes **core management actions** such as Add Employee, View, Edit, Delete, and Filter, along with **Export functionality** for data handling.

In addition, I have designed detailed workflows for **permission management**, including **individual permissions and full access controls**, along with their respective confirmation states to ensure accuracy and control. The module also includes **security-related features** such as Reset Password (popup and screen), **Lock and Unlock account flows**, and corresponding confirmation states to ensure proper user management and system security.

Overall, the module is structured to provide a clear, efficient, and controlled environment for managing staff roles and access within the system.

Currently, I have started designing the **Report Module**, focusing on structuring data insights, reporting formats, and analytical views for better monitoring and decision-making.

Anoop K

Role:Python Developer

Project: Academic App

Work Completed:

A meeting was conducted to discuss company updates and new feature developments.

Key enhancements and upcoming functionalities were reviewed to ensure alignment across the team.

Additionally, a separate meeting was held regarding the Investors App,

during which the project details were clearly explained to the Flutter developer.

The discussion included app requirements, expected features, and development timelines to ensure smooth implementation and coordination moving forward.

KARTHIKA JAYARAJAN

Role: Python Developer

Project: Academic App

Work Completed:

Today, I created an API for the Help and Support module.

Additionally, I conducted further research on the UI to better understand the design requirements and ensure proper alignment with backend functionalities.

Adithya P A

Role:Flutter Developer

Project: Academic project, Ai career prediction

Work Completed:

Today, I referred to relevant project topics and resources to enhance my understanding of the application and its implementation.

Additionally, I configured and set up the launcher icon for the project, ensuring it is properly applied across the application for a consistent and professional appearance.

MOHAMMED SHIBIN K

Role:Game Developer

Project: Academic project, Rankify Test Battle App

Work Completed:

Today, I continued working on Level 2 of the escape room mini-game, focusing on refining puzzle systems and improving overall game logic to ensure smoother more reliable interactions. I also worked on setting up and polishing visual elements to maintain consistency with the antique and patriotic theme. Additionally, I improved input handling and debugged issues in the keypad and interaction systems, enhancing the overall gameplay experience. Alongside this, I spent time researching ideas and concepts for the next mini-game design to plan future development. Overall, today's progress brings Level 2 closer to completion, with a few remaining refinements planned for the next phase.
