

DAILY WORK REPORT

Date: 22/05/2026

Team Task Summary

Anoop K

Role:Python Developer

Project: Investor App/LMS Project

Work Completed:

A SLAMS Track LMS project meeting was conducted to discuss the project requirements and overall workflow in detail.

The backend project structure and related application modules for the SLAMS Track system were also planned and created to support smooth development and implementation.

Team responsibilities and development flow were reviewed to ensure proper coordination and timely progress.

Cinda sibichan

Role:Python Developer

Project: Investor App/LMS Project

Work Completed:

Attended a team meeting regarding the **LMS Attendance Project**, where the overall workflow, feature expectations, and implementation planning were discussed. Clarifications were made on module responsibilities and project structure.

- Initiated the setup for the new **LMS Project**, including:
 - Configuring the initial project structure for scalable development.
 - Organizing core modules and backend architecture for maintainability.
 - Setting up foundational configurations required for development.
- Implemented the initial setup for **request and response encryption**, focusing on improving API communication security and protecting sensitive data exchange between client and server.

Albin Mathew

Role:Python Developer

Project: Investor App

Work Completed:

Today, I strengthened the Telecaller KYC onboarding workflow by implementing production-grade investor identity validation rules with strict email and mobile number uniqueness enforcement across both onboarding and investor account layers. I also refined the serializer and lifecycle validation architecture to safely support rejected KYC resubmissions using the same onboarding record while preventing duplicate investor identities and unauthorized onboarding duplication.

Additionally, I improved the onboarding engine by resolving frontend-backend workflow inconsistencies, correcting eligible lead filtering logic, stabilizing KYC lifecycle transitions, and aligning the Telecaller onboarding workflow with a secure fintech-style Lead → KYC → Investor Account transformation architecture.

Adithya P A

Role:Flutter Developer

Project: Investor App

Work Completed:

Today, I successfully completed the animation implementation for the Bank Details sections to enhance user interaction and improve the overall application experience.

Additionally, I focused on refining and restructuring the existing codebase to make it more professional, maintainable, and organized by improving code structure, reusability, and overall implementation quality.

The updates were integrated while maintaining consistency with the overall application design and performance standards.

MUHAMMED SHIBIN K

Role: Game Developer

Project: Academic project, Rankify Test Battle

Work Completed:

Trivia

- Categorized large-scale trivia questions into Easy, Medium, and Hard difficulty levels for better gameplay progression and balancing.
- Designed and implemented a difficulty scaling system in the trivia gameplay flow to gradually increase challenge level during long sessions.
- Improved random question distribution logic and reduced repetitive question appearances using recent-question memory tracking systems.
- Optimized endless gameplay queue handling and background question preloading for smoother uninterrupted player experience.
- Worked on player data persistence systems including local save management and Firebase database synchronization.
- Continued preparing leaderboard-ready player profile structures containing username, score, playtime, and performance statistics.
- Generated and refined categorized trivia datasets for History, Geography, Economy, Science, and Polity topics.
- Fixed repeated-question generation issues and improved dataset formatting compatibility for Firestore and JetAdmin imports.
- Continued refining timer-based scoring mechanics and overall endless trivia progression systems.

Menu & Minigames

- Worked on improving end-level progression and result screen presentation, including messaging and player feedback flow for completed levels.
- Added and refined UI content to better communicate upcoming updates and future level additions to players.
- Continued fixing gameplay and UI-related bugs identified during testing to improve stability and consistency across scenes.
- Worked on improving scene navigation and transition flow between mini-games, trivia sections, and menus.
- Continued integrating and testing audio elements, including sound effects and background music, to enhance immersion and gameplay feedback.
- Performed additional optimization and cleanup tasks for UI assets and gameplay elements to improve mobile performance.

- Conducted APK build testing and debugging to verify smooth gameplay functionality across different Android devices.
